The Open
IoT Studio

As the internet becomes increasingly physical, it amplifies the power to do good and to cause harm.

We are a Mozilla program in partnership with the University of Dundee advancing internet health in emerging technologies. Initiated in 2016 as a learning network for professionals, we explore the responsibilities and opportunities for the internet and things.

Voice-enabled internet
How can users of voice assistants be more aware of how devices constantly listen to our conversations and use our data?

Machine learning
How can the algorithms that control many aspects of our digital lives be made more visible and understandable?

Trust
How can consumer devices be more transparent in indicating how data is collected and processed?

Sustainable production
How can the creation of digital technology move beyond "designed in California, assembled in China"?

The problem with connected objects is to understand what, behind the scenes, is connected to and interacting with what.

- Gillian Crampton Smith
